

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

Percolation of the bloud of Animals, whereby that of the one

thould be changed into the nature of the other.

3. The most probable use of this Experiment may be conjectured to be, that one Animal may live with the bloud of another; and consequently, that those Animals, that want bloud, or have corrupt bloud, may be supplyed from others with a sufficient quantity, and of such as is good, provided the Transfusion be often repeated, by reason of the quick expence that is made of the bloud.

## Note.

In the last Transactions was also promised an Accompt by the next, of Monsenr Hevelius his accurate Calcul. of the late Solar Eclipses. Duration, Quantity, &c. But this being to be accompanyed with a Scheme, the Graving whereof met with a disappointment, it must be still referred to another Opportunity.

## An account of some Sanative Waters in Herefordshire.

This account was communicated by Dr. B. in these words.

There are two Springs in Herefordshire, whereof one is within a Bolt, or at least Bow-shoot of the top of the near adjoyning lofty Hill of Malvern, and at great distance from the Foot of the Hill; and hath had a long and old fame for healing of eyes. When I was for some years molested with Teters on the back of one and sometimes of both my hands, notwithstanding all indeavours of my very friendly and skilful Phyfitians, I had speedy healing from a neighbouring Spring of far less fame. Yet this Spring healed very old and Ulcerous fores on the Legs of a poor Fellow, which had been poyson'd by Irons in the Gaol, after other Chirurgery had been hopeless. And by many tryals upon my hands, and the Tetters. I was perswaded, that in long droughts, and lasting dry Froits, those waters were more effectually and more speedily healing, than at other times. And not to omit this circumstance, I did hold this water in my mouth till it was warm, and perchance somewhat intermingled with fasting Spittle,

and so dropping it upon the Teter, I there could see it immediately gather a very thin skin upon the raw sless, not unlike that which is seen to gather upon Milk over a gentle fire. This skin would have small holes in it, through which a moisture did issue in small drops, which being wip'd away, and the water continued to be dropp'd warm out of the mouth, the holes would diminish, and at last be all quite healed up.

For the Eye-waters, I conceived them more strongly tersive, and clearing the Eyes; and they had a rough smartness, as if

they carryed Sand or Gravel into the Eye.

I have known and try'd three or four healing Fountains

of late discovery, or of no old fame that I could hear of.

I did once put rich *Pearl* for some days in a vessel of water, to try whether the water would acquire a healing vertue; but my Experiments were interrupted. I had in my thoughts many other ways of Tryal; which I may resume hereafter.

## A farther Accompt of the Vitriolate-water, mention'd Num. 18 p. 323. Together with fome other Particulars touching Waters.

This comes from the same hand as follows;

I formerly mention'd to you, that, if that Pool of Mr. Philip's, which seems to be of Vitriolate-water, were on my ground, I would drain it, and search the head of the Spring, pursuing the source, till I could well discern, through what lay of Earth or Gravel it does pass. Now I shall tell you, that I have taken order for the further tryal of the said Water, by boiling a greater quantity in a Furnace, &c. But just as we were in readiness for the tryal, a stream of Rain-water fell into the Pool, and so discouraged us for the present. I have also taken a course to turn the falling Waters aside, and to drain the Pool, that we may see, what the Native Springs (whether one or more) may be. Of which more hereafter.

I wish (so he goes on) we had a full Accompt of our Salt-Springs at Drost-wych near Worcester, and at Nant-wych in Cheshire (what other Salt-Springs we have in England, I know not:)
